Telit certifies LTE Cat M1 with AT&T

London, 31 August 2017 – Telit Communications PLC (“Telit”, “the Group”, AIM: TCM), a global enabler of the Internet of Things (IoT), today announced that its ME910C1-NA module is the first Telit LTE Category M1 (Cat M1) module to receive certification for operation on AT&T’s LTE nationwide network.

Certification means IoT integrators and providers can start taking advantage of the reliability and coverage of AT&T’s LTE Cat M1 network for the IoT.

Yosi Fait, Telit’s Interim Chief Executive Officer, said:

“This is an important milestone for Telit customers. Our existing customers using 2G or 3G modules from Telit can now move to the newly certified Cat M1 module, go through the required AT&T testing with our help and start deploying Cat M1 products in a matter of weeks.”

Telit’s LTE Cat M1 module is based on Qualcomm® LTE modem and is the first of this technology to receive AT&T Cat M1 certification. The module expedites migration of existing 2G/3G connections and shortens time-to-market for new IoT devices.

Industries that demand lower costs, security and extended product lifecycles now have more options with Telit’s LTE Cat M1 module. The combination of LTE Cat M1 technology and extensive feature set makes this module an ideal solution for new applications in vertical segments such as telematics, smart energy and metering, asset tracking, retail point of sale, security and surveillance, industrial control and automation, smart home, and smart buildings.

About Telit

[Telit](#) (AIM: TCM), is a global leader in Internet of Things (IoT) enablement. The company offers the industry’s broadest portfolio of integrated products and services for end-to-end IoT deployments – including cellular communication modules in all technologies, GNSS, Wi-Fi, short-to-long range wireless modules, IoT connectivity plans and IoT platform services. Through the [IoT Portal](#), Telit makes IoT onboarding easy, reduces risk, time to market, complexity and costs for asset tracking, remote monitoring and control, telematics, industrial automation and others, across many industries and vertical markets worldwide.
